Pioneering motion capture since 1984.

ProEclipse

Navigate. Customize.Search.

ProEclipse intelligent search functionality

Key Facts

- Seamlessly import existing databases
- Navigate using Windows Explorer approach
- Customize your databases with extra searchable information
- Search for trials across multiple databases
- Find and sort trials to build comparative data sets

Compatibility

ProEclipse will work perfectly with Nexus 1.0, Polygon 4.0, BodyBuilder 3.0 or above, and existing Eclipse databases.

ProEclipse is the new data management system for Vicon Life Science software users. With improved database navigation and intelligent search functionality, ProEclipse will enable you to find your data with ease.

Find your data, fast

A redesigned navigation system provides an easier and more efficient way for you to access your data. With options such as:

- Recent databases list
- Web browser controls
- Quick Find file name

With all these benefits, you'll find your way around ProEclipse and get-going in seconds.

Intelligent search

The Search Query Wizard in ProEclipse allows you to search within customized data columns (metadata) or C3D files across

multiple databases saved on your PC or on your network.

This powerful new tool allows you to build complex search criterion to find exactly the results you want and sort it using the metadata columns.

Simple customization

Easily add new data columns into your database to hold new metadata information.

These new columns will be fully searchable by the intelligent ProEclipse search functionality, so you can organize, save, and find all your data, simply and effectively.

Compatibility

ProEclipse is compatible with Vicon Nexus, Polygon and BodyBuilder and is available to download for all Nexus 1 users. It can be installed and run under Windows 7 64-bit OS.
